

- **New SQL Tab for DBeaver**

- Link: <https://github.com/dbeaver/dbeaver/issues/29305>
- Label: Feature request
- Introduction: User just can use shortcut to get a new script with the newest version, which sometimes needs time to find. Therefore some users want to get a new one after clicking on UI like Toad for Oracle.
- Motivation:
 - Adding this feature can help customers to manipulate database easier and improve their satisfaction.
 - Although just adding a button, this feature involves some modules of front-end and back-end, so it's practical.
 - Advisor has been paying attention to the progress of this topic, and as a user, he hopes that dbeaver will become better, so he hopes this opinion can be adopted to improve the user experience.

- **Drop column**

- Link: <https://github.com/dbeaver/dbeaver/issues/23456>
- Label: Feature request
- Introduction: Generated SQL has no order now when deleting multiple columns in a table which can cause execution errors. Therefore customer wants SQL generated can be changed into a correct order.
- Motivation:
 - Incorrect order of SQL statements will indeed cause operation failure. Absolutely this is a problem that must be solved.
 - Many users have raised this opinion, and it seems that it has been modified in some database management system, but some have not.

- **Composite foreign keys**

- Link: <https://github.com/dbeaver/dbeaver/issues/29309>
- Label: Bug
- Introduction: DBeaver does not read composite foreign keys in a SQLite database correctly.
- Motivation:
 - Because of this problem, users give up using composite foreign keys.
 - This problem has not occurred in previous versions, indicating that the updated part has affected the previously existing code and this feature.
